

Press Release

EICON Technology First to Support Microsoft's ISDN Accelerator Pack 1.1

Eicon Technology Corporation has announced its family of DIVA ISDN adapter cards supports Microsoft's ISDN Accelerator Pack 1.1. Users who purchase any DIVA internal ISDN device will now also receive a copy of Microsoft's ISDN Accelerator Pack 1.1, allowing Windows 95 users to run at a full 128 Kbps without any driver modifications.

Microsoft's ISDN Accelerator Pack 1.1 supports Multilink PPP (MLPPP), which allows the bonding of the two B-channels for maximum performance. With MLPPP, data transmission rates of 128 Kbps are now obtainable, resulting in speeds up to five times faster than analogue modems.

"We are pleased that Eicon has added support for the ISDN Accelerator Pack 1.1 to their DIVA for Windows 95 solution package," said Peter Moore, senior marketing manager, Desktop Operating Systems, Microsoft Australia. "Eicon's DIVA ISDN adapters together with Microsoft's Accelerator Pack 1.1 provide the complete ISDN solution to maximise a Windows 95 client's remote access capacity."

Alex Gostin, Eicon's technical marketing manager Asia-Pacific, said: *"The addition of Multilink PPP into the ISDN Accelerator Pack 1.1 allows Windows 95 users to take full advantage*

of the speed of ISDN. Our DIVA adapters and software fully integrate with the ISDN Accelerator Pack and Windows 95, making DIVA the ideal ISDN solution for Windows 95."

Availability and Pricing

Eicon's DIVA for Windows package featuring Microsoft's ISDN Accelerator Pack 1.1 is currently shipping and is priced as follows (ex tax): ISA card version - \$1050; PCM card version - \$1195.
