Dear Readers

The Biodiversity Challenge

This issue contains some interesting perspectives on protection of the biodiversity. With over 30% of the fish populations categorized as over-exploited, depleted or collapsed, a paper by Vanessa Smith reviews the effectiveness of marine protected areas. Whilst MPAs are the most common strategy adopted to protect marine biodiversity Vanessa has found they are beset by many weaknesses, including in particular, the high cost of administration and the fact that fish populations are highly mobile and rarely stay within these designated areas. She also observes that current geographic extent of MPAs is only about 1% of the marine environment, which greatly undermines their effectiveness. She also considers the socio-economic strategy of allocating property rights in fisheries, which are argued to provide the incentives necessary to empower fishers to sustainably manage fish stocks. Australia is one country which has recently adopted this approach, by introducing tradeable quotas in several major fisheries.

Rhett Martin has provided a paper on the more specific problem of marine turtles. This particular group of species provides a major regulatory challenge due to its migratory lifestyle, which continually crosses state boundaries. Rhett provides a valuable insight into the mix of international law and regional agreements such as the Commission for Environmental Cooperation (CEC) established between the governments of the United States, Canada and Mexico. Interestingly, this agreement is derived from the North American Free Trade Agreement (NAFTA), and thus it provides an encouraging example of symbiosis between trade law and the environment.

The final paper in this issue is on the more generic topic of negotiated rule making. It is well recognized that one of the biggest challenges for environmental law is to find a mechanism for ensuring that local 'stakeholder' views are appropriately considered in the relevant decision making processes. John Haydon and Genevieve Jenkins have provided an informative review of recent developments in the United States and some of the early applications of this concept in this country. They point out that most environmental problems require guidance from local communities in order to achieve the most effective policy responses.
